                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1371
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1311
```

```
The present sequence represents a human lung cancer specific gene (LSG), and encodes a polypeptide designated Lng103. LSGs are useful in the treatment and diagnosis of lung cancer. The treatment and diagnosis of lung cancer which down regulates the expression of an LSG. An immune response can be mounted against a target cell expressing an LSG. Identification of potential therapeutic agents for use in imaging and treating lung cancer which comprises screening molecules for an ability to bind to or decrease expression of an LSG relative to LSG in the absence of the agent where the ability of a molecule to bind to the LSG or decrease expression of the LSG is indicative of the molecule being useful in imaging and treating lung

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC diagnostics, forensics, gene mapping, identification of mutations in CC diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC afficeation, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes,
                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutatio responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                  biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Drmanac

ABA01989

The present invention provides the protein and coding sequences pf n human G-protein coupled receptors, designated NOVI, NOVZ, NOVZ, NOV3, NOV5a, NOV5b, NOV6b, NOV6b, NOV77, NOV8b, NOV9 and NOV10. These be used in the treatment of NOVX related diseases, including cancer, metabolic, neurodegenerative, immune, haematopoietic, developmental, retinal, feeding, neurological and psychotic diseases and disorders in the foreigns.

associated proteins represented in AAB58106 - AAB5848. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and cimmunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and peptide AAB58549 are used in the course of the invention for the sequences.

This sequence represents a fragment of one of the human secreted convergences. This sequence represents a fragment of one of the human secreted proteins. The genes and their corresponding secreted polypeptides are consistent or gene therapy. Also pathological conditions, convergences by protein or gene therapy. Also pathological conditions can be compared by determining the amount of the new polypeptides in a sample cor by determining the presence of mutations in the new genes. Specific cuses are described for each of the 94 genes, based on which tissues they care most highly expressed in, and include developing products for the conditions or treatment of cancer, tumours, developmental abnormalities can foetal deficiencies, blood disorders, developmental abnormalities can foetal deficiencies, blood disorders, alzheimer's and cognitive considered solves, atherosclerosis, diabetes, cardiovascular disorders, kidney constructed in the construction of the sequences, shown in AAY86334 to AAY86585 represent fragments of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a library of polynucleotides comprising CC 1079 nucleotide sequences (given in AAH31067 to AAH31145). Also described CC are: (1) an isolated polynucleotide (1) having at least 90% identity to CC one of the 1079 sequences; (2) a recombinant host cell containing (1); CC (3) an isolated polypeptide (II) encoded by (I); (4) an antibody that CC specifically binds to (II); (5) a vector comprising (I); and (6) a method CC of detecting differentially expressed genes correlated with a cancerous CC state of a mammalian cell comprising detecting a gene product encoded by CC (5 of the 1079 sequences given in the specification. The polynucleotides CC are used to monitor patients having (or susceptible) to cancer to detect CC potentially malignant events at a molecular level before they are CC detectable at a gross morphological level. The polynucleotides are also useful for monitoring the efficacy of various therapies and preventive CC interventions. Polynucleotide probes based on the disclosed sequences CC are useful for chromosome mapping and detection of transcription levels. The 1079 polynucleotide sequences were derived from a human colon cancer CC cell line Km1214-A cDNA library.

The present invention provides the protein and coding sequences pf nove, human G-protein coupled receptors, designated NOV1, NOV2, NOV3, NOV4, NOV5, NOV56, NOV66, NOV6b, NOV7, NOV8b, NOV9 and NOV10. These or be used in the treatment of NOVX related diseases, including cancer, metabolic, neurodegenerative, immune, haematopoietic, developmental, retinal, feeding, neurological and psychotic diseases and disorders and infections. The present sequence is the NOV6a coding sequence, the gene for which is found on chromosome 20. The NOV6a protein shares homology
